PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. Claims 13, 14, 18, 21, 23, 25, 27, 34-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Dedrick (U.S. Pat. No. 5,717,923) in view of Lee et al. (U.S. Pat. No. 6,751,459), hereinafter referred to as Lee.
2. Regarding claim 13, Dedrick teaches about a user information processing system comprising (Fig 1) (Col 2, lines 60-65): a terminal unit "client system-personal computer" for use by a user adapted for accumulating use of said terminal unit by said user and the profile information of said user "client activities monitoring", wherein said profile information includes identifying Information about said terminal unit (Col 5, lines 20-40) (Col 5, lines 50-60); (The session manager has to know the identity of the terminal (IP source address) in order to setup a session between the terminal and server). said server "metering server" server accessible by said terminal unit adapted for producing said profile information; (Col 9, lines 25-35); and storing means "personal profile database 27" detachably provided in said terminal unit for storing said profile Information so that when the user uses a terminal unit, the terminal unit accesses the user profile information from the storing means to obtain information peculiar to the particular user using the terminal, the storing means including at least one of an address book and user schedule data (Col 5, lines 50-65) (Col 6, lines 5-15); but does explicitly teach that the user and profile information is collected base on the terminal use

Art Unit: 2144

information. Dedrick teaches about the possibility of using different client systems (Terminal unit) (Col 3, lines 1-10) in which each transaction is stored for billing purpose.

3. Lee teaches about the potential for the internet and the problem caused when one user is allowed to access more than one terminal (Col 1, line 60- Col 2, line 20). Lee teaches the solution of using terminal use information (Col 2, line 60-Col 3, line 15). It would have been obvious at the time of the invention for some one of ordinary skill to improve on the billing process of Dedrick by using Lee invention which provide the means for better transaction recording in a growing complex technology like the internet.

4. Regarding claim 14, Dedrick combined with Lee, teaches about a terminal unit comprising: use record information writing means for writing use record information used by the user (Col 5, lines 50-65); storing means detachable provided in said terminal unit for storing profile information of said user so that when the user uses a terminal unit, the terminal unit accesses the user profile information from the storing means to obtain information peculiar to the particular user using the terminal unit, the storing means including at least one of an address book and user schedule data (column 5, lines 50-59) (Dedrick Col 6, lines 5-15); transmitting means "session manager" for transmitting said use record information "personal profile" accumulated in storing means "personal profile database 27" to profile information generating means remote from the terminal unit for every prescribed timing (Dedrick Col 5, lines 20-35) (Dedrick Col 6, lines 5-15) (Dedrick Col 9, lines 25-35); profile information writing means for receiving the profile information of said user based on said use record information

which is transmitted from said profile information generating means and writing said received profile Information in said storing means "personal profile database 30", wherein at least one of said use record information and said profile information includes identifying information for said terminal unit (Dedrick Col 9, lines 25-40); and (Transaction requires known the identities of the terminal and the server). selecting means for selecting provided information corresponding to said profile information written in said storing means from among provided information transmitted from prescribed information providing means (Dedrick Col 6, line 65- Col 7, line 10) (Dedrick Col 7, lines 55-65).

5. Regarding claim 18, Dedrick combined with Lee, teaches about a terminal unit comprising: use record information writing means for writing use record information used by a user in prescribed storing means detachably provided in said terminal unit for storing profile information of said user so that when the user uses a terminal unit, the terminal unit accesses the user profile information from the storing means to obtain information peculiar to the particular user using the terminal, the storing means including at least one of an address book and user schedule data (Dedrick Col 5, lines 50-65) (Dedrick Col 6, lines 5-15). (Dedrick Col 5, lines 20-40) (Covered in claim 13); profile information writing means for writing profile information of said user in said storing means "personal profile database 27", wherein said profile information is generated by a profile information generating means "statistic compilation process 26" remote from the terminal unit on the basis of said use record information accumulated in said storing means, and wherein at least one of said use record information and said

Art Unit: 2144

profile Information includes identifying information for said terminal unit (Dedrick Col 5, lines 20-40); and (The session manager has to know the identity of the terminal (IP source address) in order to setup a session between the terminal and server). selecting means for selecting provided information corresponding to said profile information written in said storing means from among provided information transmitted from prescribed information providing means (Dedrick Col 6, line 65- Col 7, line 10) (Dedrick Col 7, lines 55-65).

6. Regarding claim 21, Dedrick combined with Lee, teaches about an apparatus for providing information to a terminal unit remote from the apparatus, said apparatus comprising: profile Information generating means for generating profile information of a prescribed user based on the use record information of said terminal unit of said user transmitted from said terminal unit, wherein at least one of said use record information and said profile information includes identifying information for the terminal unit (Dedrick Col 5, lines 20-40) (Dedrick Col 9, lines 25-35) (Covered in claim 13); (The session manager has to know the identity of the terminal (IP source address) in order to setup a session between the terminal and server). transmitting means for transmitting said generated profile information to the terminal unit (Dedrick Col 5, lines 20-40); and storing means detachably provided in said the terminal unit for accumulating said use record information and said profile information so that when the user uses a terminal unit, the terminal unit accesses the user profile information from the storing means to obtain information peculiar to the particular user using the terminal, the storing means

including at least one of an address book and user schedule data (Dedrick Col 5, lines 50-65) (Dedrick Col 6, lines 5-15). (Dedrick Col 5, lines 20-40).

7. Regarding claim 23, Dedrick combined with Lee, teaches about an apparatus for providing information to a terminal unit remote from the apparatus, said apparatus comprising (Fig 1): profile information generating means for generating the profile information of a prescribed user base on use record information of said terminal unit of said user transmitted from said terminal unit wherein at least one of said use record information and said profile information includes identifying information for said terminal unit (Dedrick Col 5, lines 20-40) (Covered in claim 13); and (The session manager has to know the identity of the terminal (e.g. IP source address) in order to setup a session between the terminal and server). storing means for storing said profile information thus generated, wherein said storing means is a storage medium detachably provided in said terminal unit so that when the user uses a terminal unit, the terminal unit accesses the user profile information from the storing means to obtain information peculiar to the particular user using the terminal, the storing means including at least one of an address book and user schedule data (Dedrick Col 5, lines 50-65) (Dedrick Col 6, lines 5-15). (Dedrick Col 5, lines 20-40) (Dedrick Col 5, lines 20-40) (Dedrick Col 6, lines 5-15).

8. Regarding claim 25, Dedrick combined with Lee, teaches about an apparatus for providing Information according to claim 23 further comprising: selecting means for selecting information supplied to said user base on the profile Information stored in said storing means (Dedrick Col 6, line 65- Col 7, line 10) (Dedrick Col 7, lines 55-65).

9. Regarding claim 27, Dedrick combined with Lee, teaches about a user information processing system comprising: a terminal unit adapted to accumulate terminal use record Information "client activity" upon use of the terminal unit by a user (Dedrick Col 5, lines 20-40); a storage medium detachably provided in said terminal unit so that when the user uses a terminal unit, the terminal unit accesses the user profile information from the storing means to obtain information peculiar to the particular user using the terminal, the storing means including at least one of an address book and user schedule data (Dedrick Col 5, lines 50-65) (Dedrick Col 6, lines 5-15). (Dedrick Col 5, lines 20-40) a server adapted to generate profile information of the user "personal profile" on the basis of the terminal use record information accumulated by the terminal unit, wherein said terminal unit is adapted to accumulate the profile information generated by said server, and wherein at least one of said use record information and said profile information includes identifying Information for said terminal unit (Dedrick Col 5, lines 20-40).

10. Regarding claim 38, the prior art of record teaches the method and system wherein the apparatus is configured for providing information to a plurality of terminal units remote from the apparatus (see Dedrick, column 5, line 20 through column 6, line 3).

11. Regarding claims 34-41, the prior art of record teaches the method and system further comprising a plurality of terminal units adapted to accumulate terminal use record information when used by the user (see Dedrick, column 5, line 20 through column 6, line 3).

12. Regarding claim 42, Dedrick disclosed wherein the profile analysis processing part receiving said use record information and producing said original profile information based on said use record information includes specific information relating to user preference (see column 5, lines 50-59).

13. Claims 28-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dedrick (U.S. Pat. No. 5,717,923), in view of Lee et al. (U.S. Pat. No. 6,751,459), hereinafter referred to as Lee, in further view of what was well known at the time of invention.

14. Dedrick disclosed the method and system substantially as detailed above, with the intention of monitoring and tracking a user's activity on a network (see column 5, lines 34-49). The system was concerned with storing personal data for each user (see column 5, lines 50-59). Similarly, Lee disclosed monitoring a user's activity pattern, including the location of the user, and storing such information in a user profile (see column 18, lines 6-41).

15. While the prior art discloses various types of data used for tracking a user, the prior art references do not specifically teach using GPS data as claimed.

16. Examiner takes Official Notice (see MPEP § 2144.03) that the use of GPS data in a computer networking environment was well known in the art at the time the invention was made.

17. It would have been obvious to one of ordinary skill in the art at the time of invention to combine the teachings of Dedrick and Lee to provide a system for

monitoring and storing information about a user's activity, the information including GPS data as claimed. Both Dedrick and Lee were concerned with providing information on a user's activity patterns, and as in Lee, specifically the location of a user. It was well known at the time of invention that GPS data could be used to track the location of a user. Accordingly, one of ordinary skill in the art would have been motivated to consider incorporating the use of GPS data in the prior art combination in order to improve the tracking system suggested and provided a more accurate and detailed set of information about a user.

### ***Response to Arguments***

18. Applicant's arguments filed 02/27/08 have been fully considered but they are not persuasive.

19. Regarding claims 13, 14, 18, 21, 23, 25, 27, and 34-42 rejected under 35 U.S.C. 103(a) as being unpatentable over Dedrick in view of Lee, Applicant's sole argument is that the prior art references do not teach a detachable storing means that includes at least one of an address book and user scheduled data. However, Examiner submits that the broadly recited claim limitation is read upon by the disclosure of Dedrick, which discloses that the "personal profile database" that "maintains the user profile data for the end user(s)...may also include additional information such as...mailing addresses" (column 5, lines 50-59).

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Maniwang whose telephone number is (571) 272-3928. The examiner can normally be reached on 8:00AM - 4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William C. Vaughn can be reached on (571) 272-3922. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
